

25 April 1983

MEMORANDUM FOR THE RECORD

SUBJECT: Trip Report

1. This is a trip report for the SHARE 60 Conference held in San Francisco on the week of 20 February 1983. I attended this conference as a representative for the Data Base Management Branch. This was my first time for attending SHARE.

2. I had hoped to attend several of the Data Base Administration sessions. However, at SHARE 60 most of the sessions were closed working group sessions. I was not on the working group and therefore could not attend.

3. I attended several sessions for VM users, one of the sessions was AIM, presented by [redacted] of SPD. [redacted] gave an excellent presentation of AIM and although I was an AIM user before the conference, he helped clear up some areas that I was uncertain of.

STAT

4. There were several presentations for the 3380 Users Group. The consensus of the users at SHARE 60 is that the 3380's are extremely reliable machines.

5. In the constantly changing environment in the field of data processing, I feel that conferences such as SHARE 60 are an excellent vehicle to stay abreast of what is in progress now as well as avoiding some of the problems already experienced by other users and installations.
